

**WIDEORBIT**

DRIVING THE BUSINESS OF ADVERTISING

**FEATURE**

RS232 com port interface to WideOrbit, formerly known as Abacast streaming PC for (1) RDS data display and (2) Ad insertion for web streaming.

**SOFTWARE VERSION**

New~Wave

Version 1.0.2 or later

Date 8-14-2013 or later

Digilink-Xtreme

Windows OS: Windows 7

Version 1.60.0 or later

Date 8-13-2013 or later

Digilink-HD

Version 1.0.1 or later

Date 6-01-2015 or later

**INSTALLATION**

Wideorbit/Abacast requires a streaming PC, running their software, that is separate from the automation system PC. The automation PC will communicate with the Wideorbit/Abacast streaming PC via an RS232 com port connection. An RS232 com port must be assigned for the automation to talk to the streaming PC. This is done by creating a text file that the automation reads for the RS232 setup.

**DIGILINK-XTREME & NEW WAVE ONLY****PART 1**

To set up an RS232 com port for Wideorbit/Abacast...

- 1) Create a text file named 'Streaming Comport Setup.txt'
- 2) In the first line in the text file, place the RS232 com port number (i.e- 3)
- 3) In the second line in the text file, place the baud rate (i.e- 9600)  
Please note that the baud rate must be the same for both PCs.
- 4) Save the text file into the '\Streaming Services' directory.
  - A) Digilink-Xtreme  
C:\Arrakis\Xtreme\Streaming Services
  - B) New~wave  
C:\NEW~WAVE\Streaming Services

- 5) If the automation is open, restart the automation so that it will read the com port setup

## PART 2

It is also necessary to tell the automation to activate the Wideorbit/Abacast interface. This is done by creating another text file. The file needs to have no actual text in it. The automation simply looks for a file with this name. The file is named 'Format 2 enabled.txt' and is also placed in the '\Streaming Services' directory.

- A) Digilink-Xtreme  
C:\Arrakis\Xtreme\Streaming Services
- B) New~wave  
C:\NEW~WAVE\Streaming Services

If the automation is open, restart the automation so that it will read the command.

## TESTING WIDEORBIT/ABACAST

The automation sends Wideorbit/Abacast a line of text every time a new audio file is played. To make it easier to test the setup, the automation saves the line that it sends to Wideorbit/Abacast in a text file.

The line is located in '\Streaming Services\Format 2.txt'

The line should look like: example = C|1:00|Title|Artist  
where

- a) the first field is C,O or M for Commercial, Other, or Music
- b) the second field (1:00) is the length of the audio file
- c) the 3rd field (Title) is the title of the song
- d) the last field (Artist) is the artist of the song
- e) the pipe (|) character separates the fields
- f) there are no spaces between the pipe character and the data
- g) the line will be ended with a 'Line feed' which is a non-printable character

## IMPORTANT NOTE

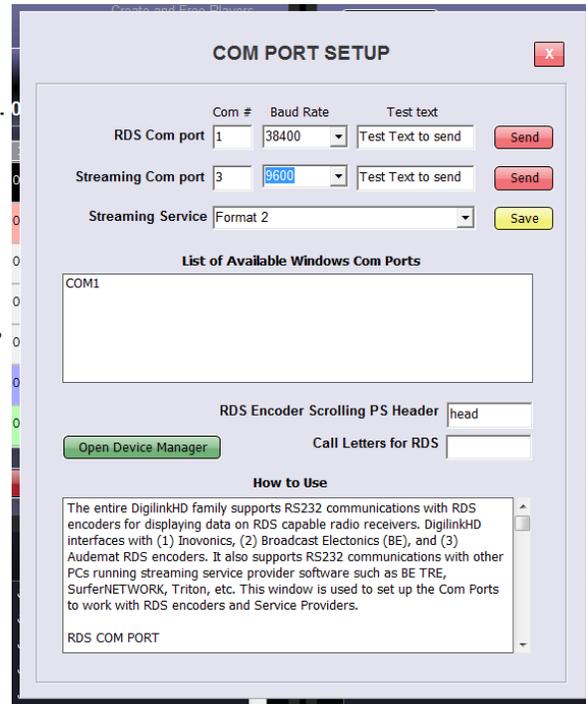

Whenever a type S spot file is played within your automation software, it will automatically output as a Type C for commercial for Wideorbit/Abacast. When you setup Wideorbit/Abacast, you will want to use C for all your spot file.

## DIGILINK-HD ONLY

To setup Wideorbit/Abacast for Digilink-HD:

- 1) In the Digilink-HD On-Air software, go to **File**.
- 2) Select **Setup** (enter setup password if necessary).
- 3) Select **Com Ports**.
- 4) Under **Streaming Com port**, select the port that your RS232 is on and choose the correct **Baud Rate** that Abacast will be receiving the information.
- 5) Select the **Streaming Service** that you are using, which is **Format 8** in the drop down menu.
- 6) Close the **COM PORT SETUP** screen and restart the Digilink-HD software.

### NOTE:

- 1) All Type **S** spots in DHD will go out via meta data as an 'S'.
- 2) All Type **C** audio files in DHD will go out as a 'C' in the meta data. Any type C file will be replaced with another ad by Wideorbit (ad replacement). But the original audio (type C audio file) will still play out of DHD as normal (to play over terrestrial radio), and will be reported as a spot that has played in the DHD-Tools reports for reconciliation.
- 3) All Type **M** music files in DHD will go out as a type 'M' and display Artist and Title information. Wideorbit should then
- 4) All other types in DHD will be reported as their respective type. Type X will go out as type x, etc...
