

Autofill – Random files being selected to fill

Symptoms:

Files that are either out of kill date, or that do not exist are getting replaced by random audio files that are not a Type 'A'. These files tend to be within +/-%10 of the length of the file that is getting replaced. This problem only applies to stations running the 1.10 version of the software.

Solutions:

This specific error only applies to the software version 1.10 between the dates of 12-6-2010 and 2-22-2011. The only way to fix it is to update the software to the latest version of 1.10.
