

Library – Cart rotations not updating properly

Symptoms:

Audio files either added or subtracted as cart rotations are not being recognized in Xtreme. The only way to correct the issue is to turn off the Xtreme software and turn it back on.

Solutions:

This was an issue with the 2009 version of the software. The problem was fixed with the 1.9.2 and the 1.10 version of the software.

If on the correct version, and the file has not been updated, be sure to go to the On Air screen and then go back to the Library screen. This should refresh any changes or additions to the Library screen.
