

Library – Error Rename File

Symptoms:

When saving information to an audio file in the Library, it comes up with an error: Error Rename File. The changes made for the audio file does not get made, and changing other files are not recognized either until the software has been restarted.

Solutions:

This problem typically occurs when an audio file is getting edited in the Library screen while it is playing on the On Air screen. When the file is in use, it is impossible for its information, such as Type, Title, ect... can be changed.

The only way to fix it is to restart the software. It is important to note what files are playing on the On Air screen and to not make changes to the file while it is playing.
