

## Music Templates – First Category doesn't play

### Symptoms:

In the 1.9 version of the software, when creating a Music Template in the scheduler screen, the first scheduled category is omitted from when the Music Template and the Traffic file is merged.

### Solutions:

In the 1.9 version of the software, when creating Music Templates, the software will always omit whatever is scheduled first in the Music Template. So in the example:

Song 2  
Song 3  
Song 3  
Song J  
Song 8  
ect....

The very first scheduled category, in this example it is Song 2, will be dropped from being scheduled. The way to correct this issue is to put a dummy category first, so for the example above, the music template should look something like this:

Song 0  
Song 2  
Song 3  
Song 3  
Song J  
Song 8  
ect...

Since there is the extra Song 0, the Song 0 will get dropped and the rest will play as desired.
