

Schedule – Not playing schedule overnight

Symptoms:

The Xtreme stops playing the schedule over night and the playlist is blank. This typically happens overnight. Stopping the automation and starting it again typically resets the schedule. If you look in the **LOG** screen you may only see:
X LOADSCHD Auto-load next hour
 from midnight until the morning.

Solutions:

This is caused by scheduling a Timed Break at exactly 12:00am. There should never be a Timed Break scheduled at 12:00am. Computers have a unique struggle with the concept of a 24 hour schedule. When passing from the 23rd hour (11pm) to the 24th hour (12am) which is the 00 hour, it may encounter glitches since it feels that the 23:00 hour is higher than the 00:00 hour. To counter this problem we require the midnight hour to follow these specific instructions:

- 1) this is required for every 11pm hour of the week
- 2) schedule a **Timed Break** at 23:59:49
- 3) add a 10 second station ID after the **Timed Break**. This station ID must be no longer than 10.9 seconds
- 4) do not schedule a **Timed Break** at the beginning of the 00:00 (12am) hour
