

Timed Record – MP3 256kbps not an option

Symptoms:

In the setup options for the Timed Record, there is no option for MPEG Layer 3, 256kbps to chose from.

Solutions:

Computers as a default do not have MPEG Layer 3 (mp3) 256kbps codec as an option. This is something that must be purchased or acquired. To add MP3 256kbps as an option:

- 1) download and install Windows Media Player 12 or newer. This may already be installed on the PC, if so then disregard this step
- 2) download this zip file:
<http://www.arrakis-systems.com/ftp/pub/Automation/Beta/mp3codec.ZIP>
- 3) save this file to the C:/Arrakis folder
- 4) open the zip folder and double click on both registry key editors. Click on OK after each message
- 5) restart your PC, the MP3 256kbps should now be an option on your PC for recording
